

Obtaining a permit for your Best Barns shed or garage kits

*Do-it-Yourself kits from Best Barns are designed for use as storage buildings or garages only. Use for any other purposes is neither implied nor inferred.**

Building code offices and HOA's may require additional documents to obtain a permit. The homeowner's first step is to contact their local code office and ask what is needed for the size of building to be purchased.

Typically, the necessary documentation may include some or all of the following.

- o Elevations showing at least two sides of structure.
- o Site plan showing existing structures and proposed build site.
- o Engineered drawings for truss system indicating snow and wind load ratings.**
- o Cross sections of wall framing and foundation.
- o Tie down locations for high wind load areas.***

Permit requirements vary based on location. Some areas may not require a permit at all. The documents provided by Best Barns are intended to help the homeowner with the permit process but do not guarantee a permit will be issued. It is the homeowner's responsibility to determine if a permit is required and submit the necessary documentation.

*Any alteration to the construction of Best Barns sheds or garages may require the services of a civil engineer to meet local building codes. Best Barns cannot provide these additional services.

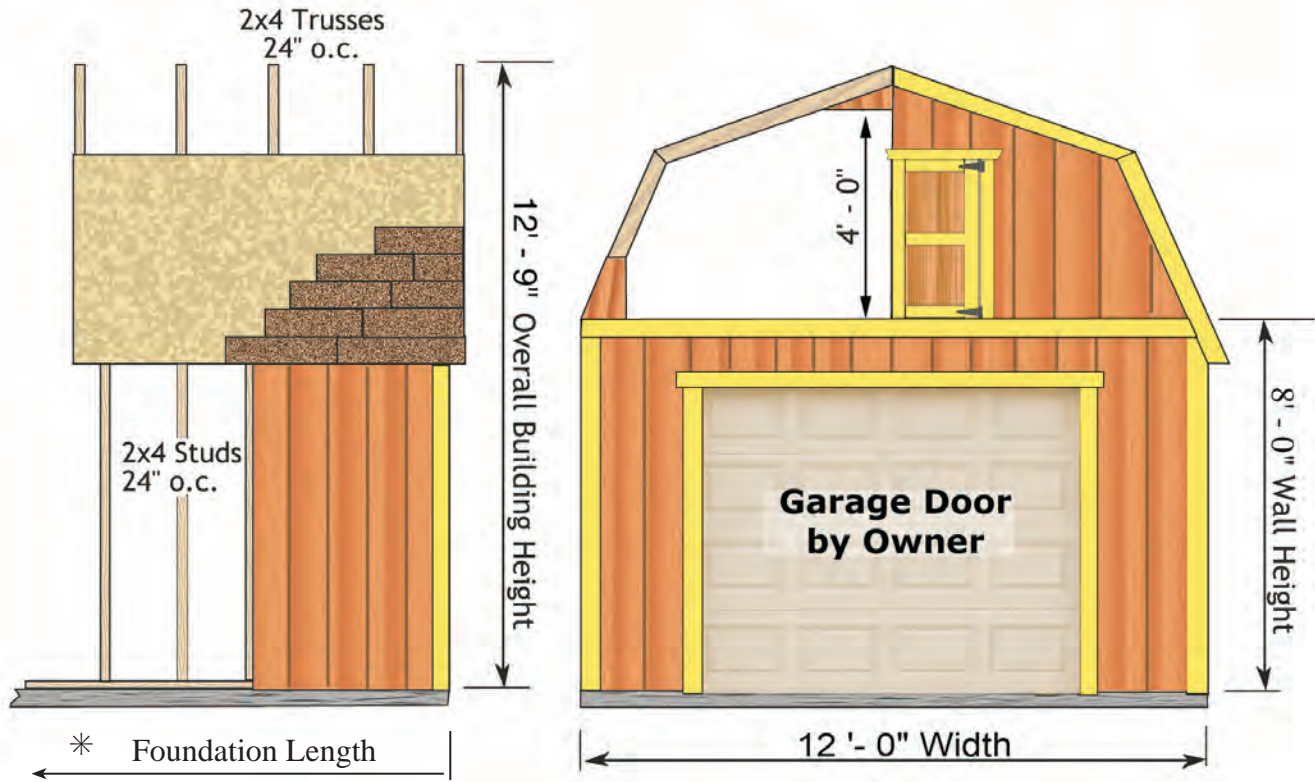

** Engineered truss drawings stamped for your individual state can be obtained upon request. Some models do not have wind and snow load ratings. A deposit will be required if the shed or garage kit has not yet been purchased. Contact us directly at 800-245-1577 for further details.

*** Certain states such as Florida and California have stringent requirements for obtaining a permit. Depending on your location, a civil engineer's services may be required to provide necessary documents. These services are the homeowner's responsibility to obtain and are not included in the purchase of a shed or garage kit.

Before you order our kit or begin construction, obtain a building permit. If additional documents are required contact questions@barnkits.com.

TAHOE ELEVATION

Wall Framing: Constructed from 2x4 pre-cut wall studs spaced 24" o.c. Bottom plate, top and tie plate. Door Header is a 2x10.

2nd Loft Floor: Loft floor on each end with a 4' wide access opening between loft sections. A 42" x 36" high loft door opening on front gable.

Siding: Louisiana-Pacific 'SmartPanel' 8" o.c. groove, primed ready to paint

Roof System: 2x4 trusses spaced 24" on center. 7/16" OSB roof sheathing. *Shingles by owner.*

Exterior Trim: White pine door jamb, trim for door opening, gable trim and sidewall fascia.

Garage Door: By Owner.

Floor: Sold optionally.

Hardware: Nails for framing, metal hurricane hangers for trusses.

Optional Sturdy-built Floor System:

2x4 treated floor joist spaced 12" on center covered with 3/4" plywood, *not treated*, installed over 4x4 treated runners. Galvanized door sill and nails are included. Material is not pre-cut.

- * 12'x16' Foundation Size 12'-0" x 16'-0"
- 12'x20' Foundation Size 12'-0" x 20'-0"

Best Barns model: _____
____ft. wide x ____ft. long
